

Contents

Preface	ix
1 Reactors, Bombs and Visions: A Brief History of the Nuclear Age	1
Part I Basics of Nuclear Physics and Radioactivity	
2 Nuclear Physics and Its Applications	29
The Structure of Atoms	29
The Forces in the Atomic Nucleus	31
Elements and Isotopes	34
Material Transformations and Nuclear Reaction Equations	41
Origin and Synthesis of the Elements	45
Important Applications of Nuclear Physics	47
3 Radioactivity – The Physics and Biology	51
Alpha, Beta and Gamma Radiation	51
Decay Series	57
Biological Effects of Radioactive Radiation	57

vi **Contents**

	Natural and Artificial Radiation Exposure.....	61
	Radiation Damage	67
	Radiation Risk: Cancer and the Linear No-Threshold Model.....	70
	Cardiovascular Diseases.....	74
	Cellular Repair Mechanisms	75
4	Types of Radioactive Substances.....	77
	Fission Products, Transuranium Elements and Activated Materials.....	78
	Important Radioactive Isotopes.....	81
 Part II Nuclear Power Plants		
5	How to Operate a Nuclear Reactor.....	89
	The Principle of Power Generation by Nuclear Energy	90
	Control of the Chain Reaction	96
6	Reactor Types and Safety.....	105
	Power Reactors	106
	Research Reactors	117
	Safety and Emergency Systems	123
	The INES Scale: Within and outside the Safety Margins.....	132
	Training and Testing	134
	Probabilistic Safety Assessment and Residual Risk.....	137
7	Economic, Ecological and Political Aspects of Nuclear Energy	139
	The Nuclear Industry and the Fuel Chain	139
	Construction and Decommissioning of Nuclear Power Plants	143
	Current Status of the Nuclear Industry	147
	Ecological Footprint and Life-Cycle Assessment	149
	Open and Hidden Costs.....	151

Part III Social Conflict Areas of Nuclear Energy

8 Uranium Mining	157
Occurrence and Quantities	157
Extraction and Processing	159
Hazards in Uranium Mining	164
The Church Rock Disaster	168
9 Proliferation	173
The Balance of Terror	174
Global Distribution of Nuclear Weapons	176
Functionality of Nuclear Weapons	178
The Relationship Between Civil and Military Nuclear Technology	183
Civil Nuclear Bombs	186
Known Cases of Proliferation	187
10 Radioactive Incidents and Disasters	195
Kyshtym	195
Three Mile Island, Windscale and Similar Incidents	198
Chernobyl	207
Fukushima	221
Aspects of the Operational Safety of Nuclear Power Plants	231
The Human Factor, Residual Risks and Ethical Conflicts of Nuclear Energy	235
11 Disposal	241
Types and Quantities of Nuclear Waste	242
Dangers from Nuclear Waste	248
Utopian Disposal Concepts	251
Partitioning and Transmutation	252
The Concept of Final Disposal	260
Open Questions and Ethical Problems of Final Disposal	268
Pathways for a Responsible Storage and Treatment of Nuclear Waste	279

viii **Contents**

Glossary	289
Literature	297
Index	303
